PREPARATION LEAVE
MANAGEMENT, PAPER
WRITING SKILLS AND
ORAL EXAMS WERE
IDENTIFIED BY VIJAY
NAVALE AS KEY AREAS
THAT NEED TO BE
STRESSED ON BY
ENGINEERING STUDENTS

Somnath Deshkar Hadapsar

Importance to technical education and strong links with industry are crucial factors to boost quality of professional education and help students' academic achievements, said Vijay D Navale, a placement officer. Industrial development in Maharashtra is next only to Pune. "Many educational institutes are promoted by industrialists so there is

concentration on the quality of education. When institutes have good facilities and take care of their students in all respect, they attract talent.

These students do well and get better placement," Vijay said. It also helps the colleges achieve good results in examinations as well as high levels of job placements, he added.

Vijay, who works with Pune District Education Association's A G Awate College of Engineering, recently

participated in Doordharshan Sayhadri channel's programme on careers. For engineering students, his advice was focus on study skill, study methods, preparation leave management, paper writing skill and oral examination.

He has also participated in Akashwani's Yuva Vahini's career programme and also guided students in a programme on a private Marathi television channel.
